

## Tutorial to create database in amibroker

Dear clients in this tutorial I am going to show you how you create database in amibroker by following 10 simple steps...

**NOTE** : Make sure that if you don't have the amibroker installation file then u can install the amibroker software from the google first

Step 1. First of all open our software that is RTDP Equity or RTDP Commodity what ever u have if u have both and want to set both software in amibroker then start both software now make sure that in our software the progress bar for data download has been complete.

Step2. Now open amibroker click on **FILE** go to **NEW** and select **DATABASE**

When u select database following dialog box will appear

Now change some setting here like ...

1. change the name of folder that is MyNewData to what ever u like ,like MyNewJetLive
2. click on create button
3. There is lot of Data source by clicking on (local datasource) u get following

Select Metastock® data plug-in option among the given option

Step 4. make sure Local data storage option should be disable

Step 5. now in the next step write 50000 in Number of bars

Step 6. There is many option u get in base time interval like

Select 5 minute or more than 5 minute bcz we provide tick by tick data of minimum candle stick of 5 minute

Step 7. in this step u have to click configure button to set the folder where we keep our real time data which is update within fraction of second, upon click on configure button u will get the following dialog box.

Step 8. Now click on **add folder** button and select the MASTER file which is under  
C:\rtdpcommo\MCX and C:\rtdpcommo\NCDEX (for commodity)

If u want equity also then select the MASTER file which is under

C:\rtdpequity\DATA1 and C:\rtdpequity\DATA2 (for equity)

Step 9. Now click on **Retrieve symbols** after click on it u see a **Done** text come beside the **Retrieve symbols** button and make sure that Intraday auto-refresh is select if not then select it ,the following screen you get after done the above steps.

Now click on Ok button u see the dialog box will disappear and the previous dialog box become appear like the below dialog box

Step 10. This is the last step in this step you just click on Ok button ,in this way our data software integrated with your amibroker....

**Thanking You**
